

STÜWA – Bridge Slotted Screens for Dewatering Projects

These screens are produced with a wall thickness of 3 mm and are therefore especially suitable for dewatering purposes. The screen assembly withstands pulling forces of 7 tons without any problem. A simple dismantling is guaranteed by the recently developed STÜWA pushfit/spring lock coupling.

bridge slotted screens for dewatering purposes with lifting cap

installation of push fit/spring lock coupling

special advantages:

- high possible pulling forces
- simple installation / dismantling of coupling
- frequent use

dismantling of retrieved assembly
